Myth as Condensed Data

Definition: Myth is a *neurosensorial reconstruction* of experience; a condensate of perception engraved into storytelling.

- **Problem:** How to measure the dynamics of meaning?
- **Subjectivity:** Not noise, but the signal itself.

> *"To study history without mathematics is like cutting out the part of Ophelia... She is very charming and a little mad."*
>
> *— A.N. Whitehead*

Methodology: The 7-State Ritual Model

Functional States:

1. Preparation
2. Contact
3. Exchange
4. Disruption
5. Negotiation
6. Stabilization
7. Return

Based on ritual theory: from anticipation to closure.

Metrics:

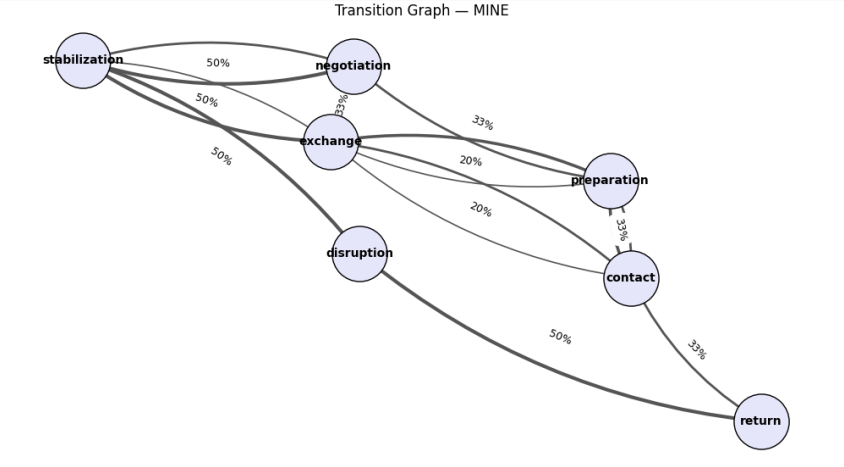
- **Shannon Entropy (H):** Measures branching/uncertainty.
- **JSD:** Divergence between human and AI models.

Data Structure (JSON)

```
{
 "segment_id": "001",
 "function": "preparation",
 "cognitive_frame": [
 "activation_through_attraction"
 ],
 "transition_from": "...",
 "transition_to": "...",
 "risk_mode": "seduction",
 "outcome_tag": "channel_opened?"
}
```

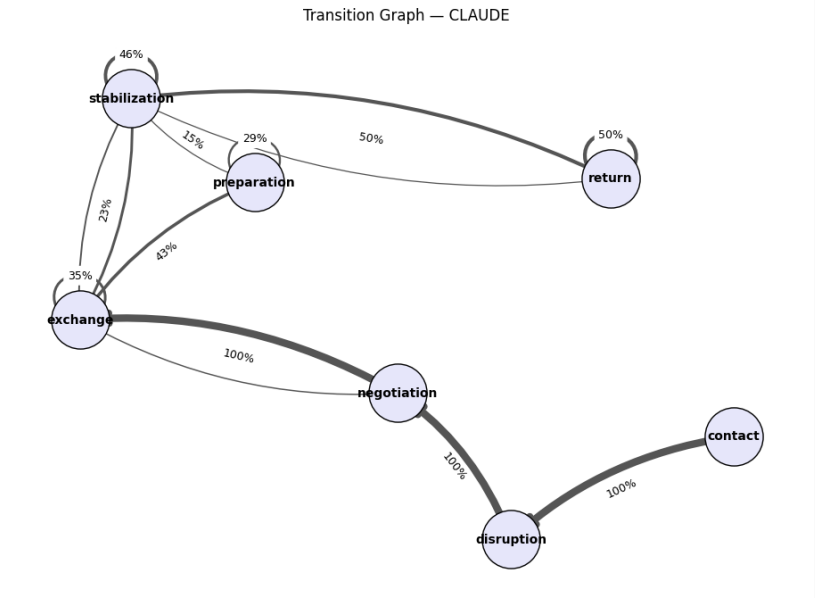
Visual Analysis: Transition Pathways

Human (Expert)



High Entropy: $H = 1.42$

AI (Claude)



Low Entropy: $H = 0.93$

Interpretation
Visualization confirms the 'entropy collapse': AI constructs linear logic where human perception preserves variability.

Results: The Entropy Collapse

Source	Mean Entropy (H)	Key Characteristic
Human (Mine)	**1.42**	High variability
Claude	0.93	High determinism
GPT / Gemini	≈ 1.15	Linear transitions

The "Donkey Stallion"Case

Citation: "A donkey stallion scratched the earth for me"

Human: Transitions from *Exchange* to *Action* (Preparation).

AI Consensus: Trapped in *Negotiation*. Models ignore physical cues to maintain linguistic logic.

Conclusion: Narrative Complexity & AI Ethics

- **Key Insight:** AI acts as a "stabilizing signal"that suppresses narrative entropy.
- **Cognitive Stratification:** The selective release of models like Claude Mythos creates new inequalities in agency.
- **Future Work:** Developing a computational framework to quantify narrative entropy suppression in aligned AI systems
